Helping Communities Better Plan the Wildland-Urban Interface

The Community Planning Assistance for Wildfire (CPAW) program works with communities to reduce wildfire risk within the wildland-urban interface through improved land use planning. We have worked with 18 communities since 2015, and are now accepting applications from eligible communities for 2018.

What do selected communities receive?

- Free, customized planning recommendations and tools over the course of one year. (Implementation of recommendations is voluntary and under the authority of the local jurisdiction.)
- Site visits and support from CPAW's multi-disciplinary team of land use planners, foresters, risk modelers, and researchers.
- Training, peer-to-peer networking, and research to help reduce risk in the wildland-urban interface.

Who can apply?

- Eligible communities include U.S. cities, towns, or counties that have authority over local land use and zoning decisions.
- Applications must be submitted jointly by the community planning and fire departments.
- Communities should be willing to commit staff time and enter into a Memorandum of Understanding. Assistance comes at no cost to the community.
